Project Name	Ledgerline – Credit Card Approval Prediction System
Maximum Marks	4 Marks

Empathy Map Canvas

Persona: Arjun — a 29-year-old salaried employee considering his first credit card application.

THINK & FEEL	SEE	SAY & DO	HEAR
• Worried about whether his income is high enough to qualify • Anxious that a rejection will hurt his credit score • Wonders if there's a way to check eligibility before formally applying	• A long application form with no feedback on his chances • Friends getting rejected with no explanation from the bank • Fintech apps that show an eligibility score before you apply	• Carefully double-checks his income and employment details before submitting • Calls customer support when he doesn't understand a rejection • Searches online for "how to improve credit card approval chances"	• Friends saying their applications were rejected "for no clear reason" • Bank ads promising "instant approval" • Colleagues advising which banks are "stricter" than others

PAIN	GAIN
• No way to check eligibility before formally applying • Rejections feel arbitrary, with no visibility into the reasoning • Slow manual review delays urgent credit needs	• An instant, clear Approve/Decline decision with a confidence score • Understanding which factors (income, employment history) affected the result • Fewer wasted applications by self-checking eligibility first
