Customer Journey Map

Date	06 July 2026
Team ID	
Project Name	Ledgerline – Credit Card Approval Prediction System
Maximum Marks	2 Marks

The customer journey map captures how each type of user interacts with the Ledgerline system stage by stage, including their thoughts, feelings, and what the system needs to do at each step.

Phase of Journey	Stage 1: Awareness	Stage 2: Application	Stage 3: Decision	Stage 4: Outcome
Actions — What does the customer do?	Considers applying for a credit card; wonders if they qualify	Fills in the application form with income, employment, and demographic details	Submits the form and waits for a decision	Receives an Approve or Decline result; if declined, may contact support
Touchpoint — What part of the system do they use?	Bank website / Ledgerline self-service eligibility page	New Application web form	ML prediction engine	Decision result page with confidence score
Customer Thought	“Will I actually get approved?”	“I hope I’ve filled this in correctly”	“How long will this take?”	“Why was I approved / declined?”
Customer Feeling	Uncertain and hopeful	Slightly anxious	Waiting with no visibility	Relieved (if approved); confused or frustrated (if declined without explanation)
Process Ownership	Marketing / Bank website	Flask form + input validation	Feature engineering + ML model	Decision engine + result page
Opportunities	Offer a public eligibility pre-check so customers know their odds before applying	Validate inputs instantly; keep the form short and clearly labelled	Return the decision in under 1 second; show the confidence score	Always explain the key factors that drove the decision, not just the label
